MESSAGE #	DESCRIPTION
1.	Call DeleteSession to delete a CCISSession object from the _Module.m_pSession collection
2.	Call the ExtractSessionNumber method to extract a session number from the specified bstrSessionID parameter. The session number is used as an index for retrieve a CCISSession object from the _Module.m_pSessions collection.
3.	Call GetSession to retrieve a pointer to the CCISSession object to delete.
4.	S_OK returned, which indicates that the CCISSession object was found.
5.	Call CompareSessionId to verify that the specified SessionID parameter matches the SessionID property in the CCISSession object. A mismatch can occur when a CCISSession object has time out, and a new CCISSession object was added to the m_pSession collection.
6.	S_OK returned, which indicates that the SessionIDs were equal.
7.	Call Remove to remove the CCISSession object from the m_pSessions collection.
